

Aim: EMBEDDED C PROGRAM TO CONVERT THE HEXADECIMAL DATA 0XCFH TO DECIMAL AND DISPLAY THE DIGITS ON PORTS P0, P1 AND P2

Objective:

- Implement Conversion: Code an algorithm in Embedded C to isolate the hundreds, tens, and units digits of a hexadecimal value.
- Control Hardware Ports: Configure and output each isolated decimal digit to specific microcontroller ports (P0, P1, and P2).
- Verify Execution: Flash the program to a microcontroller (like the 8051) and verify the correct digit values using LEDs or a simulator..

Output:
